

Dear organizers of the conference

"Analysis and Partial Differential Equations"!

Dear Prof. Michael Ruzhansky

Dear Prof. Julio Delgado

I would like to thank you for organizing the conference and for inviting me to participate and to pay all my expenses!

I would like to share with you my impressions of this scientific visit.

Firstly, it was my first experience of visiting the UK and London. I really liked the city and the country as a whole.

Particularly it is pleasant that the conference organizers have taken care not only about the payment of our stay, but the payment of our food and entertainments and excursions. So we were able to get more impressions from the visit.

Secondly, I really liked the Imperial College London. I saw that everything is done so that the employees and the guests are comfortably engage in education and research at the university.

The scientific content of the conference was especially important for me. The speakers on close scientific topics were attracted by you to the conference. And while they were from many different countries. We got a lot of new and interesting information on scientific matters close to us.

This fact also stimulates us to new scientific ideas and new joint projects.

This new experience of participating in international conferences is very useful for us. Today, our country is at the stage of exit of science to a new international level. And on this way, participation of our scientists in international scientific events is of great importance.

I believe that such activities (research visits to the UK for scientists from other developing countries) is very important for enhancing the pace of development of science in these countries.

For information, I want to inform you that in Kazakhstan mathematical science is the leader of the whole country science. Therefore it is particularly important that your project deals specifically with mathematical research. Increasing the level of

mathematical research in our country will necessarily entail raising the whole science of Kazakhstan.

If you have opportunity to organize scientific visits in the future, I would participate with great pleasure. And also I would like to bring with me and other (young) mathematicians of our country.

Yours faithfully,

Makhmud Sadybekov
